

LightTech

Module Assemblies

Features

- Custom assemblies of active / passive optical components
- Full qualification tests
- Different types of input / output connectors
- High reliability
- IEC, Telcordia/Bellcore or custom specs (if applicable)

Power level monitoring module

Allows power tapping on 8 DWDM channels; photodetector outputs are used to monitor the channel power level.

Add / Drop modules

Full 4 channels OADM module for drop and / or insert of individual channels.

The assembly includes channel filter (3 per channel), 2x2 switches, couplers and photodetectors.

The single channel power levels are equalized.

PM splitter modules

16 channel output PM splitters to feed High Speed Modulators test equipment.

The assembly includes 1x16 Single Mode splitter and 16 in-line polarizers, suitably spliced to output PM pigtails.
